Description

The Opticom™ Model 764 Multimode Phase Selector is a plug-in, four-channel, dual-priority, multimode encoded signal device designed for use with both Opticom™ infrared system (IR) emitters and detectors and Opticom™ GPS radio/GPS intersection units and vehicle equipment. It can be installed directly into the input files of Type 170 traffic controllers equipped with priority phase selection software and in virtually any other traffic controller equipped with priority phase selection inputs and related software. Phase selectors are powered from AC mains or 24 VDC and contain their own internal power supply to support Opticom™ IR detectors and Opticom™ GPS radio/GPS units.

The Opticom™ Model 764 Multimode Phase Selector may be used in IR only applications, GPS only applications, or IR and GPS applications simultaneously.

The Opticom™ Model 760 Card Rack is required when input file space is not available. When used in GPS only mode, the Opticom™ Model 1040 Card Rack may also be used.

Opticom™ Model 764 Multimode Phase Selector recognizes and discriminates among three distinct Opticom™ IR emitter frequency rates via Opticom™ detectors: high priority, low priority and probe priority. Within each of these three frequency rates, the phase selectors further discriminate among 10 classes of vehicle identification codes, with 1,000 individual vehicle codes per class — 10,000 total per frequency rate. The Opticom™ Model 764 Multimode Phase Selector also recognizes three different priority levels transmitted by Opticom™ GPS vehicle equipment: high priority, low priority and probe priority. Within each of these three priority levels, the phase selectors further discriminate among 254 agency IDs, 15 classes of vehicle identification codes, with 10,000 individual vehicle codes per class — for more than 38 million total per priority level.

Opticom™ Model 764 Multimode Phase Selector internally records each system activation. Each entry contains:

- Intersection name
- Date and time of the activity
- Vehicle class code of the activating vehicle
- Activating vehicle’s ID number
- Agency ID (GPS only)
- Channel called
- Priority of the activity
- Final green signal indications displayed at the end of the call
- Time spent in the final greens
- Duration of the activation
- If preempt has been requested and reason if not
- Turn signal status at the end of the call (GPS only)
- Entry, exit and average speed (GPS only)
- Relative priority level
- Conditional priority level

Global Traffic Technologies, LLC (GTT), formed in 2007 from 3M’s pioneering Intelligent Transportation Systems business, is the manufacturer of Opticom™ priority control systems and Canoga™ traffic sensing systems.
OPTICOM™ MODEL 764 MULTIMODE PHASE SELECTOR
OPTICOM™ SYSTEM COMPONENT FOR ENVIRONMENTS WITH INFRARED AND GPS TECHNOLOGY

Features
• IR only operation, GPS only operation, or simultaneous IR and GPS operation
• Four channels of detection
• Two auxiliary detectors per channel (IR)
• Records green signal displayed at end of preemption
• Compatible with encoded signal and non-encoded signal Opticom™ IR Emitters
• High and low priority as well as probe frequency discrimination
• Conditional priority for Transit Signal Priority (TSP) (when used with compatible AVL and/or passenger counter)
• “First-come, first-served” priority within each priority level
• Priority-by-class setting via the interface software
• Priority-by-direction setting via the interface software
• Direct installation into CA/NY Type 170 input files
• Automatic range setting using an encoded emitter (IR)
• Low-priority output may be configured for first-come, first-served or all-channel active
• User-adjustable range setting up to 2,500 feet of operation
• Compatible with most traffic controllers
• 10/100Mb Ethernet communication on the front panel
• USB 2.0 communication on the front panel
• RS232 communications front port, and rear backplane and Auxiliary Interface Panel
• User-selected communications baud rate of 1,200 to 230,400 bits per second
• Customizable ID code validation
• Flexible programming options for priority control parameters
• Detailed current Opticom™ System parameter information
• History log of most recent Opticom™ infrared and GPS system activities (10,000 entries)
• 30,000 frequency/class/vehicle code ID combinations (IR)
• More than 38 million agency/class/vehicle code combinations (GPS)
• Front panel switches and diagnostic indicators for testing
• Accurate infrared signal recognition circuitry
• Precise output pulse
• Definitive call verification
• Regulated detector power supply (IR)
• Optically isolated outputs
• Two character display and keypad to enable diagnostics and test calls to each channel
• Display LED Indicators
  - Status
  - Radio (GPS mode)
  - Link (GPS mode)
  - High signal/call per channel
  - Low signal/call per channel
  - Two-digit status display
• Two character display and keypad to enable diagnostics and test calls to each channel
• Voltage: 89 to 135 VAC, 60 Hz at up to 500mA or 24 VDC at up to 1 Amp
• Temperature: -37°C to +74°C (-34.6°F to +165.2°F)
• Humidity: 5% to 95% relative
• CE certified
• NEMA TS-2 compliance
• FCC compliance

Physical Dimensions
Length: 7.0 in. (17.8 cm) x 8.2 in. (20.8 cm) including handle
Width: 2.3 in. (5.8 cm)
Height: 4.5 in. (11.4 cm)
Weight: 0.60 lbs. (272 g)
